

Uchenna's 5-Year Climate Plan

RC-Based

- Attend all or most RC meetings on the climate emergency; listen more actively for salient points, not for notetaking alone, but more importantly, to act on, and share with others.
- Session more on my feelings about climate change, especially as a Nigerian living in my home country, so I can have clearer and better thinking when talking to people about the climate emergency.
- Invite young persons like myself to join RC and become active participants of our climate work as RCers.

Personal

- Be the change by engaging more in environmentally safe practices and singing out to my family, friends, and people around me about how critical climate change is.
- Complete more climate change courses on platforms like the United Nations Climate Change Learn at <https://unccelearn.org/> to keep myself apprised and grounded.
- Start writing blog posts on my Blog about the global climate crisis and the scary complacency of the Nigerian government toward it.
- Use social media as a tool for more climate sensitization and engagements.
- Design simple infographics that easily emphasize how urgent the climate emergency has come.

Other

- Continue my community-based climate change volunteerism with PASDO and YALI, and possibly get involved in other climate change movements around me.
